DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed 2/2/06 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of United States Patent Application Publication 20040201891 to Schrader.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-14 are rejected under 35 U.S.C. 102(e) as being anticipated by United States Patent Application Publication 20040201891 to Schrader.

Schrader discloses an optical device comprising:

- A planar waveguide substrate (SM1, SM2 in figures 3a, 3b, and 5a-5d);
- A pre-formed diffractive grating structure made from an electrically deformable layer ("G" in figures 3a-3b and 5a-5d);
- A first and second transparent electrode (ES1, ES2); and
- A control means for applying voltage between the electrodes and a dielectric gap (paragraph 25).

As to claim 2, the voltage source deforms the grating layer to change the refractive properties.

As to claims 3-4, the deformation of the surface layer is adjusted to produce desired diffraction properties for given wavelengths of the light wave (paragraph 25).

As to claim 5, performable polymer materials are used (paragraph 73).

As to claim 6, the dielectric gap is formed from air, gas or vacuum (paragraph 18).

As to claims 7-8, electrodes are planar and multiple pixels may be used with this structure to contain multiple electrodes.

As to claim 9, the electrodes are transparent (paragraph 74).

As to claims 10-11, the arrangement alters the diffraction of light.

As to claims 12-14, the device is arranged to enlarge the exit pupil and to accommodate various viewing angles (paragraph 25). It has been held that the recitation that an element is "adapted to" (in this case arranged to) perform a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchinson*, 69 USPQ 138.
